Treatment after progression to platinum-based chemotherapy and Immunotherapy : The case of Enfortumab-Vedotin

Ignacio Duran, MD, PhD
Hospital Universitario Marques de Valdecilla. IDIVAL
Santander. Cantabria

My disclosures

- **Advisory Boards:**
  - MSD, BMS, Roche-Genentech, PYCYC, IPSEN, Novartis, Bayer
- **Research Funding:**
  - Roche-Genentech, Astra-Zeneca
- **Travel expenses:**
  - Roche-Genentech, IPSEN, Astra-Zeneca,
- **Clinical Trials:**
  - BMS, Roche-Genentech, PYCYC, EISAI, MSD, Tahio Oncology, Gilead, Exelixis
- **Lectures:**
  - EUSA pharma, MSD, BMS, Roche-Genentech, IPSEN, Jansen, Astellas, Bayer,

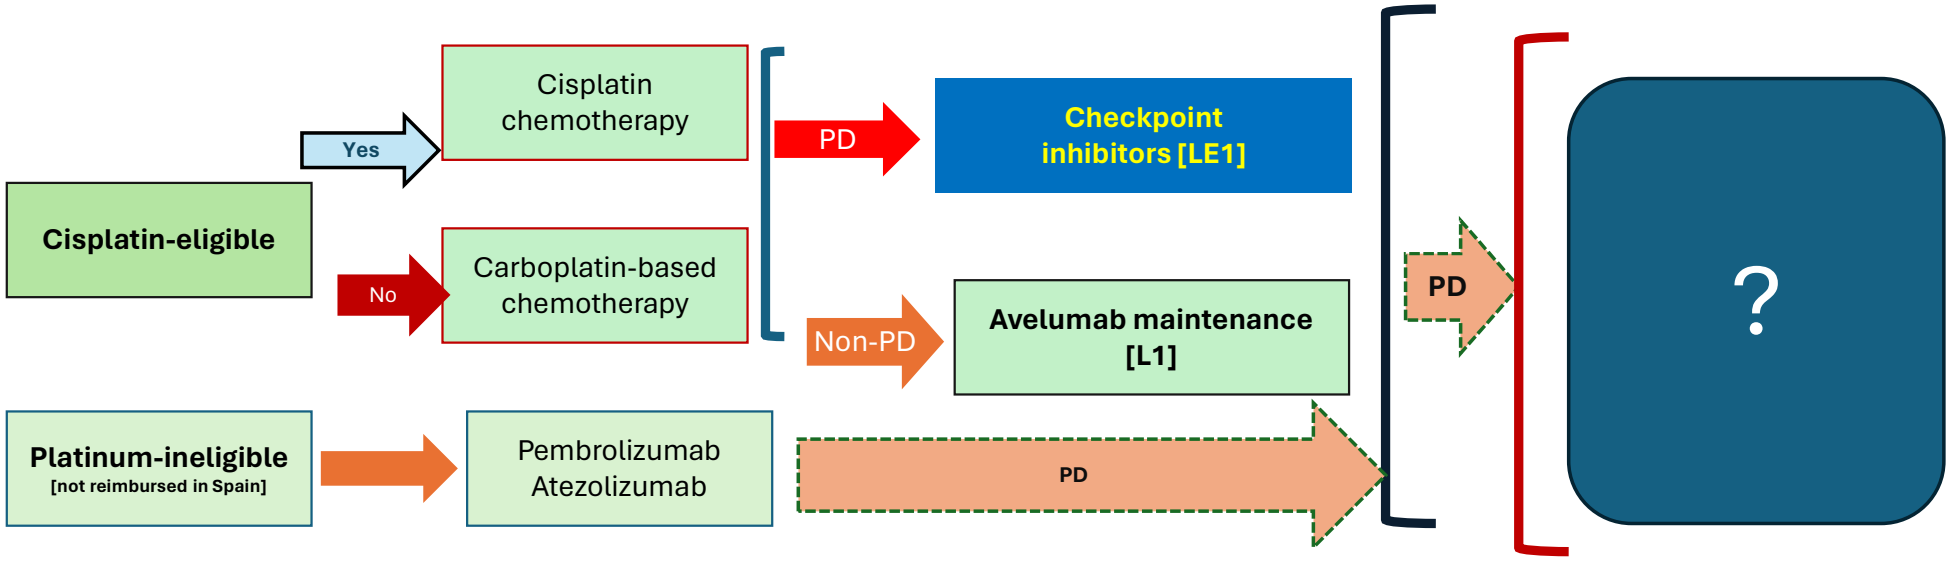
Learning objectives

- To discuss about the most appropriate therapy beyond progression to platinum-based chemotherapy and CPI with an special focus on Enfortumab Vedotin

Outline

- Current treatment scenario in Feb 2024
- The niche after chemo and CPI
- EV as the drug of choice
  - MoA
  - Appropriateness
  - Efficacy
  - Safety
- Alternatives?
- Summary

Current treatment landscape in La-mUC in 2024 [hopefully not for long time]



The therapeutic landscape of metastatic urothelial carcinoma (mUC) has dynamically changed with the recent approval of multiple new agents and will hopefully continue to revolve

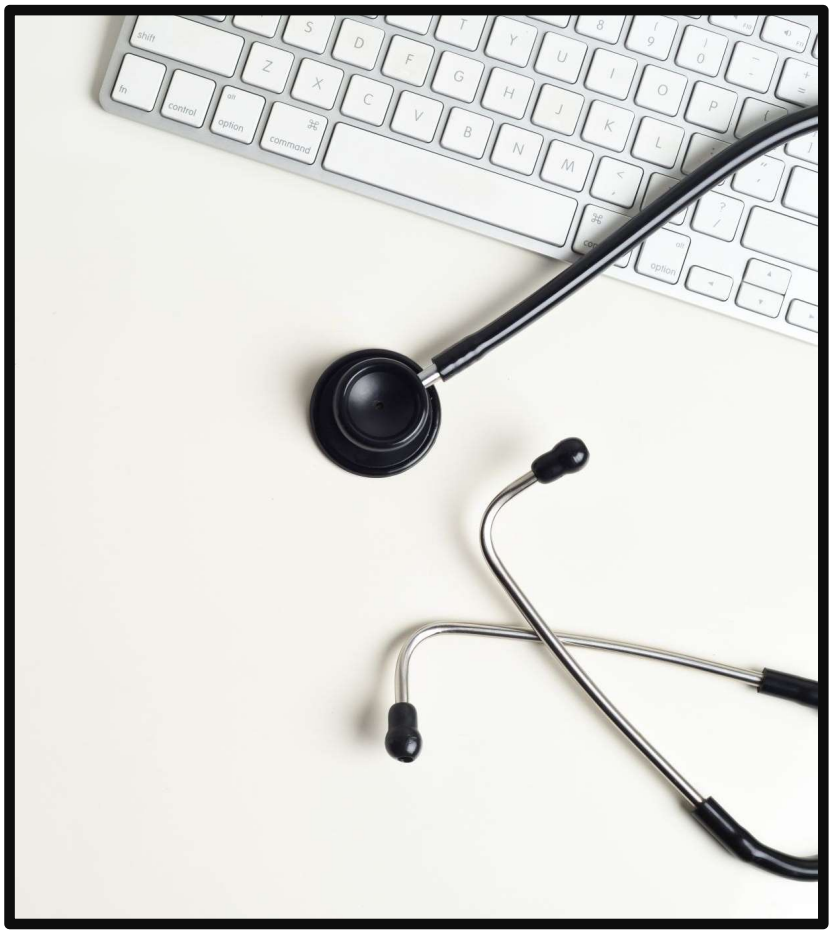
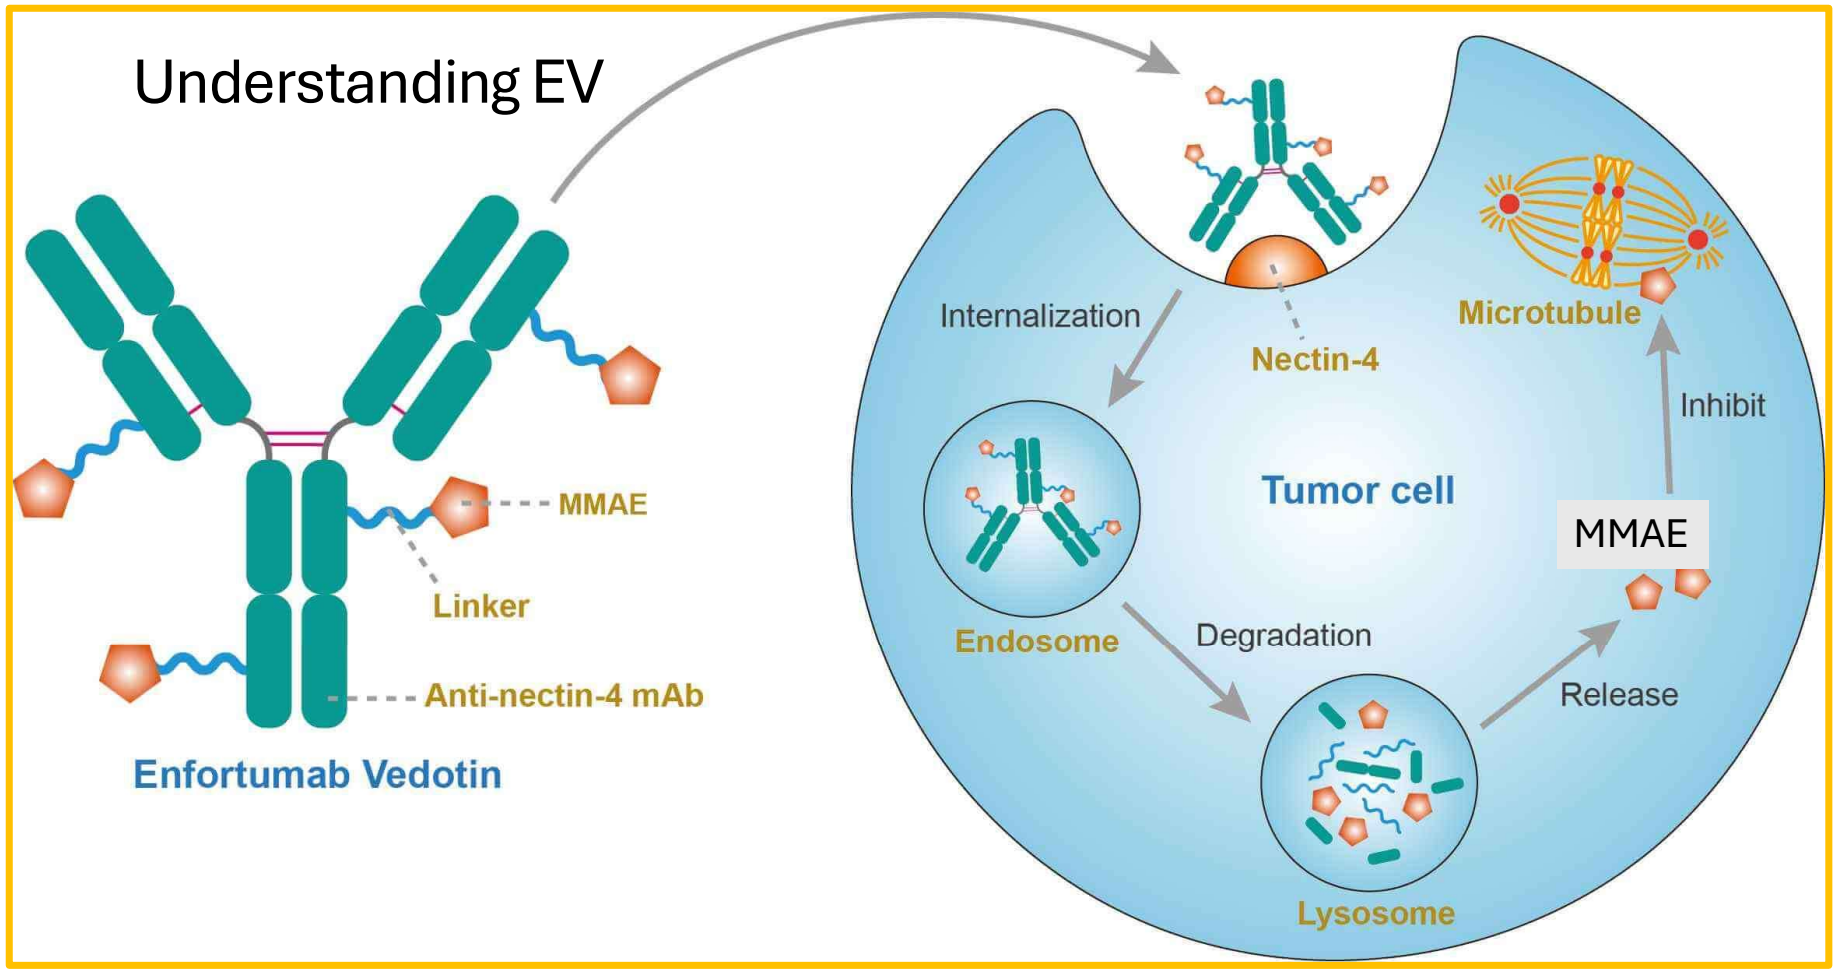
Treatment beyond progression to chemotherapy and CPI

The case of Enfortumab-Vedotin

Why a drug over another option?: My arguments



- **CONFIDENT ABOUT MoA**
- **TREATMENT APPROPRIATENESS**
- **CONFIDENT ABOUT EFFICACY**
- **TREATMENT SAFETY/QOL**
- **ALTERNATIVES**
- **SUMMARY**



ENFORTUMAB

- mAB that binds a target **(NECTIN-4**

VEDOTIN

- Microtubule-disrupting agent, **monomethyl auristatin E** (MMAE) and the linker. Very potent synthetic **<u>antimicrotubule agent</u>**

Image modified from https://www.creativebiolabs.net/enfortumab-vedotin-overview.htm Accessed Sept 19th 2023

Nectin-4

- Nectin-4, expressed by gene pvr14, **is a type I transmembrane glycoprotein,**
- As a **cell adhesion molecule**, Nectin-4 is **involved in the connection between epithelial cells and endothelial cells.**
- Nectin-4 plays a role in **oncogenesis** by mediating **cell adhesion, migration, proliferation, differentiation,** and **survival.**
- Nectin-4 expression, primarily reported by immunohistochemistry H-score reported **in nearly all UC tumor samples,** with median **H-scores** from 275 to 290 (range 0–300)

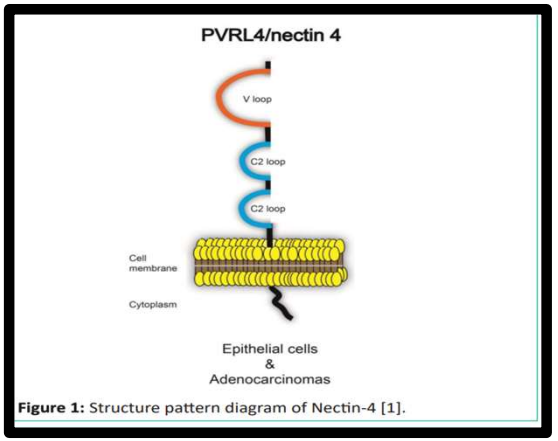


Figure 1: Structure pattern diagram of Nectin-4 [1].

Challita-Eid PM, Satpayev D, Yang P, et al: Enfortumab vedotin antibody-drug conjugate targeting Nectin-4 is a highly potent therapeutic agent in multiple preclinical cancer models. Cancer Res 76:3003-3013, 2016

Nectin-4 does NOT seem to be predictive of Benefit: EV-103 K

EV + PEMBRO

EV single agent

	No.	Mean	SD	MIN	Q1	Median	Q3	MAX
Responders	47	239.4	74.72	0	200.0	260.0	297.0	300
Nonresponders	27	222.8	98.15	0	155.0	270.0	300.0	300

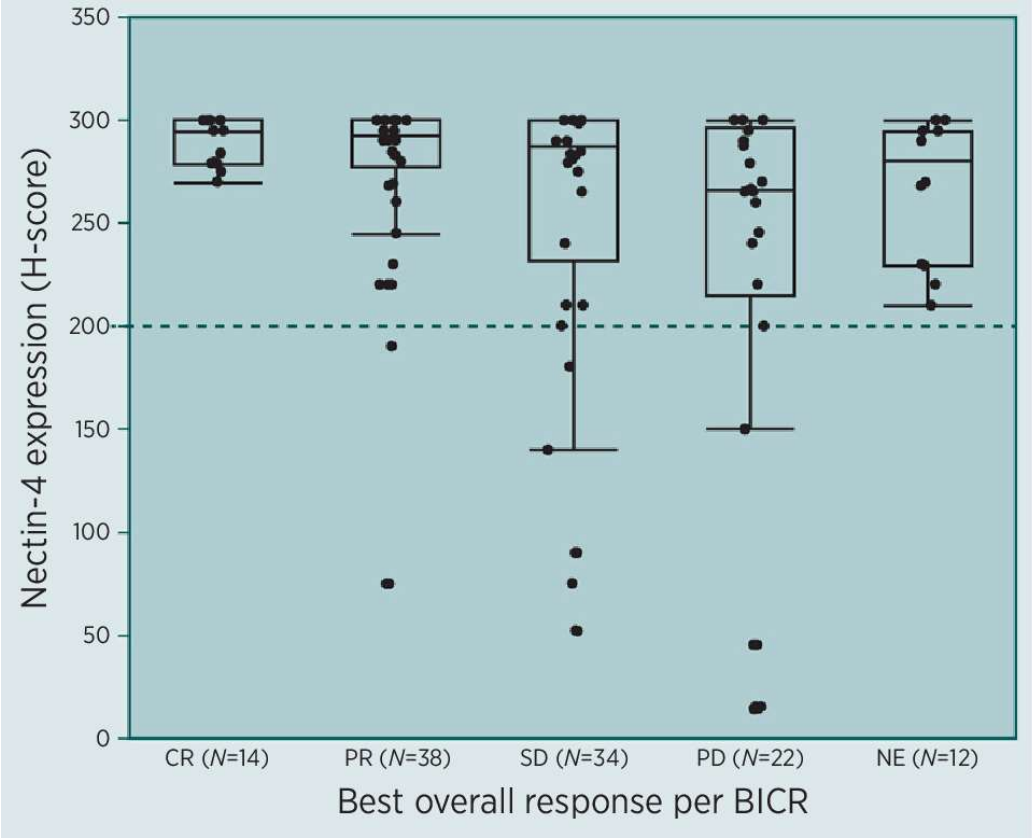
	No.	Mean	SD	MIN	Q1	Median	Q3	MAX
Responders	31	265.7	49.55	105	240.0	285.0	299.0	300
Nonresponders	35	252.5	59.87	90	205.0	280.0	297.0	300

EV-103 COHORT K

Nectin-4 expression was generally high as indicated by median H-score in the combination arm, and the distribution was similar between responders (median, 260.0; IQR, 200.0-297.0) and nonresponders (270.0; 155.0-300.0;

O'Donnell PH, Milowsky MI, Petrylak DP, Hoimes CJ, Flaig TW, Mar N, Moon HH, Friedlander TW, McKay RR, Bilen MA, Srinivas S, Burgess EF, Ramamurthy C, George S, Geynisman DM, Bracarda S, Borchiellini D, Geoffrois L, Maroto Rey JP, Ferrario C, Carret AS, Yu Y, Guseva M, Homet Moreno B, Rosenberg JE. Enfortumab Vedotin With or Without Pembrolizumab in Cisplatin-Ineligible Patients With Previously Untreated Locally Advanced or Metastatic Urothelial Cancer. J Clin Oncol. 2023 Sep 1;41(25):4107-4117. doi: 10.1200/JCO.22.02887. Epub 2023 Jun 27. PMID: 37369081; PMCID: PMC10852367.

Nectin-4 does NOT seem to be predictive of Benefit: EV-201



- Nectin-4 expression (H-score) by best overall response per BICR in **EV-201, Cohort 1**

- There is a biomarker análisis from **EV-301** that will add light to this field (manuscript in preparation)

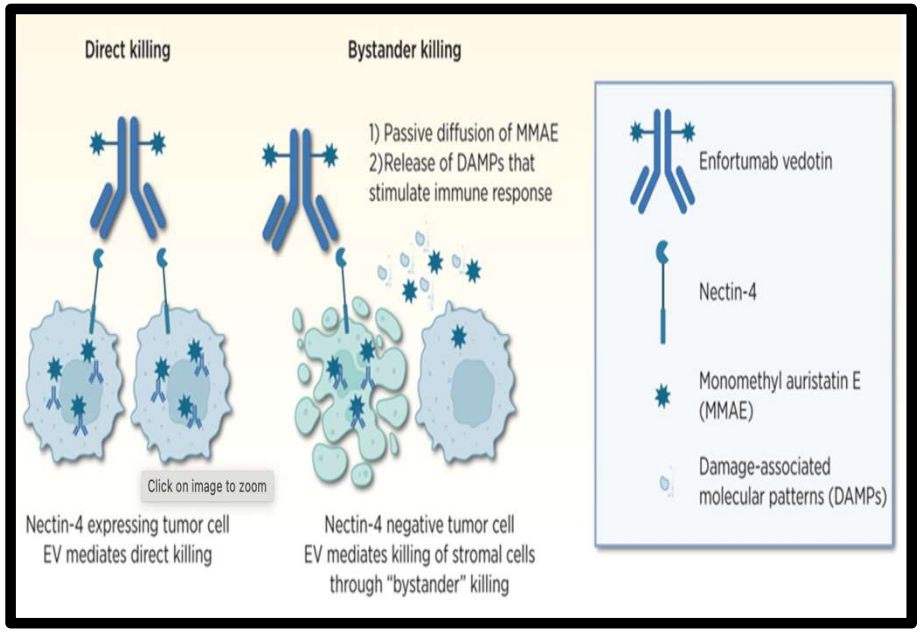
•DOI:10.1158/1078-0432.CCR-20-2275

Nectin-4 does NOT clearly seem to be a predictive biomarker of response?

- **NECTIN-4** expression **alone, MAY NOT completely identify** the universe of patients who **may benefit from EV therapy.**

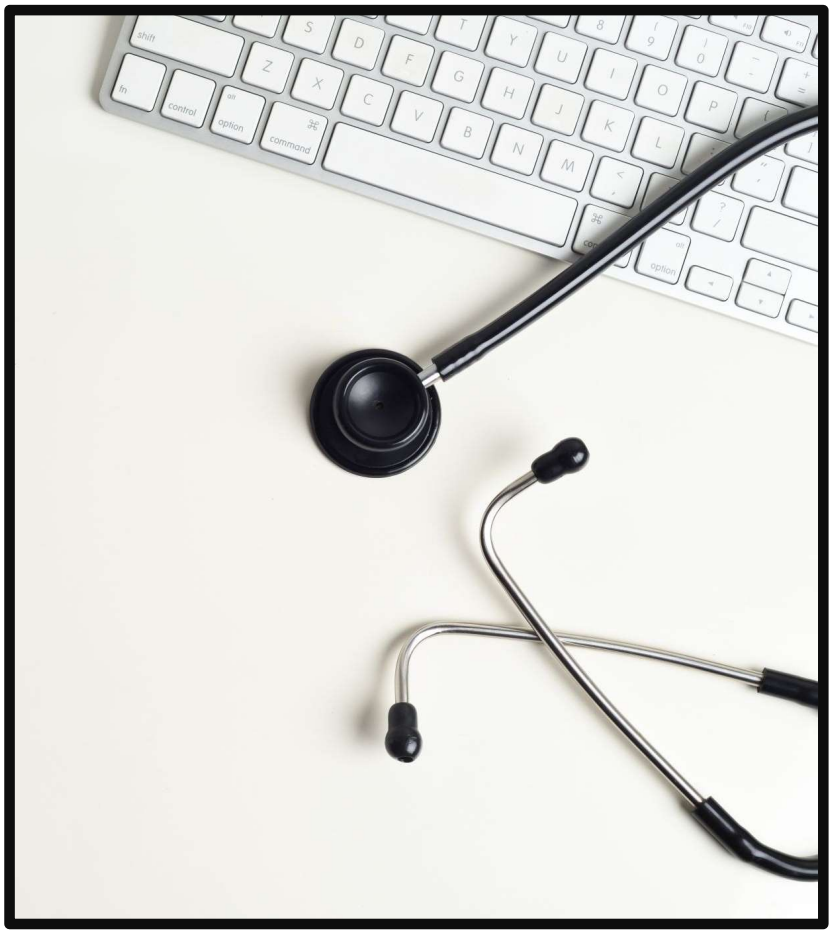
- **NECTIN-4** is potentially **a dynamic biomarker** subject to intralesional heterogeneity and temporal expression changes that may not be adequately captured by IHC from a single biopsy.

- It is possible that **some NECTIN-4 low tumors by IHC are still EV responsive,** and there has **NOT yet been defined** a **minimum threshold** of NECTIN-4 expression that is required to induce a treatment response.



Aggen DH, Chu CE, Rosenberg JE. Scratching the Surface: NECTIN-4 as a Surrogate for Enfortumab Vedotin Resistance. Clin Cancer Res. 2023 Apr 14;29(8):1377-1380.

Why a drug over another option?: My arguments



- CONFIDENT ABOUT MoA
- **TREATMENT APPROPRIATENESS**
- **CONFIDENT ABOUT EFFICACY**
- **TREATMENT SAFETY/QOL**
- **ALTERNATIVES**
- **SUMMARY**

Is the population of the pivotal study representative of the niche?

ORIGINAL ARTICLE

Enfortumab Vedotin in Previously Treated Advanced Urothelial Carcinoma

Thomas Powles, M.D., Jonathan E. Rosenberg, M.D., Guru P. Sonpavde, M.D., Yohann Loriot, M.D., Ph.D., Ignacio Durán, M.D., Ph.D., Jae-Lyun Lee, M.D., Ph.D., Nobuaki Matsubara, M.D., Christof Vulsteke, M.D., Ph.D., Daniel Castellano, M.D., Chunzhang Wu, Ph.D., Mary Campbell, M.D., Maria Matsangou, M.B., Ch.B., M.D., and Daniel P. Petrylak, M.D.

An international, open-label, randomised, Phase III study[1]

Adult patients with unresectable LA/mUC (N=608)

- Histologically/cytologically confirmed urothelial carcinoma
- ECOG PS 0 or 1
- Disease **progression or relapse during or after PD-1/L1 inhibitor** treatment
- **Prior platinum-based chemotherapy** (including as adjuvant or neoadjuvant therapy*)

R 1:1

EV 1.25 mg/kg (n=301)

30-minute IV infusion on Days 1, 8, and 15 of a 28-day cycle

Premedication not required

Investigator-chosen chemotherapy (n=307)

Either of the following as an IV infusion on Day 1 of a 21-day cycle:

- Docetaxel 75 mg/m^2 over 1 hour (n=117) (+ premedication)
- Paclitaxel 175 mg/m^2 over 3 hours (n=112) (+ premedication)
- Vinflunine 320 mg/m^2 over 20 minutes (n=78)

Premedication administered to patients receiving docetaxel or paclitaxel to prevent hypersensitivity reactions and fluid retention

Primary endpoint:
OS

Secondary endpoints:
PFS, ORR, DCR,CRR, DOR, QOL/PROs, and safety and tolerability

EV-301 was conducted to investigate the efficacy and safety of EV in patients with LA/mUC previously treated with platinum-based chemotherapy and a PD-1/L1 inhibitor[1]

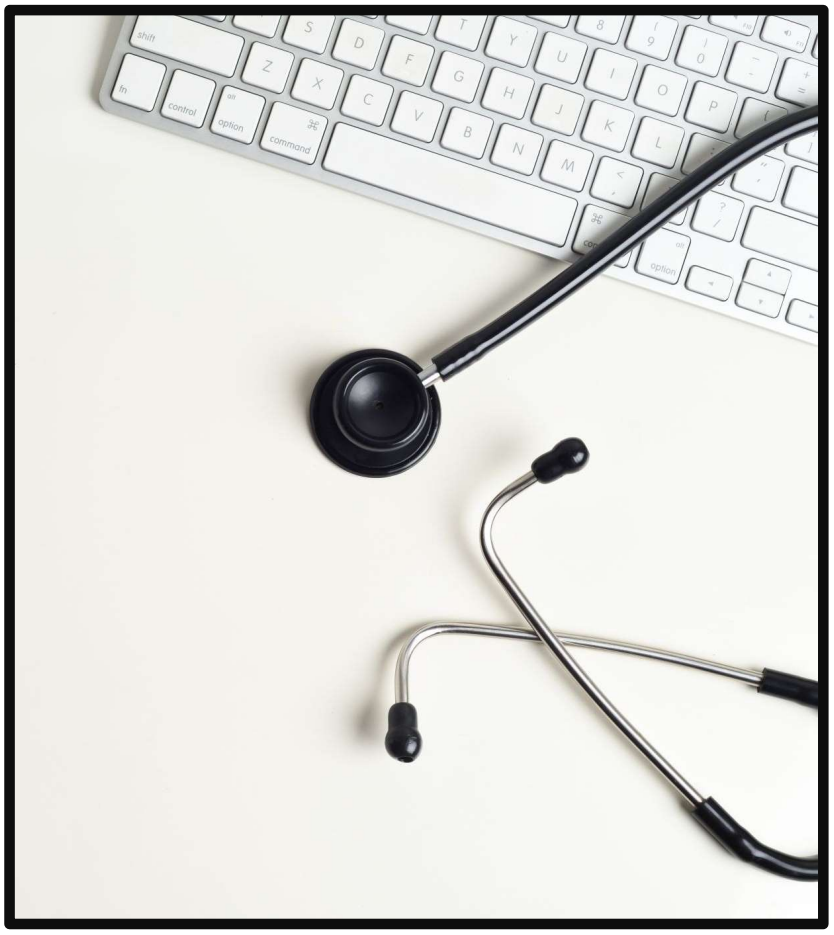
Why a drug over another option?: My arguments



- CONFIDENT ABOUT MoA
- TREATMENT APPROPRIATENESS
- CONFIDENT ABOUT EFFICACY
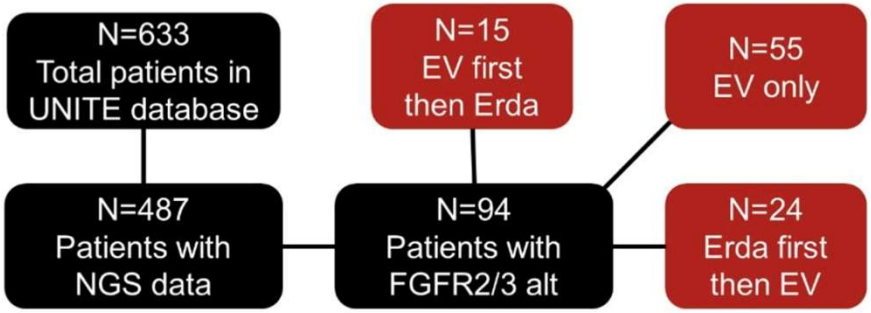
- TREATMENT SAFETY/QOL
- **ALTERNATIVES**
- **SUMMARY**

- There are other alternatives with LE-1 such as targeted therapies with FGFR inhibitors [ERDAFITINIB] in those tumors with FGFR fusions or mutations
- How frequent are these molecular alterations?
- What is the safety profile of these drugs? Can we maintain dose intensity for a long time? What is the therapeutic window?
- Why these treatment fail when compared with something stronger than "old chemo" [THOR Cohort 2]
- More importantly, DO WE HAVE ACCESS TO THESE DRUGS? ARE THEY GOING TO BE EASILY ACCESIBLE AND REIMBURSED?

Loriot Y, et al. THOR Cohort 1 Investigators. Erdafitinib or Chemotherapy in Advanced or Metastatic Urothelial Carcinoma. N Engl J Med. 2023 Nov 23;389(21):1961-1971..

Sequencing agents: The order matters?



On multivariable analysis, there was no difference in overall survival between the two treatment combination sequences.

Table 2. Univariate and Multivariate Analysis of OS and PFS Based on Clinical Characteristics

Characteristic	UVA OS: HR (95% CI)	p	MVA OS: HR (95% CI)	p	UVA PFS: HR (95% CI)	p	MVA PFS: HR (95% CI)	p

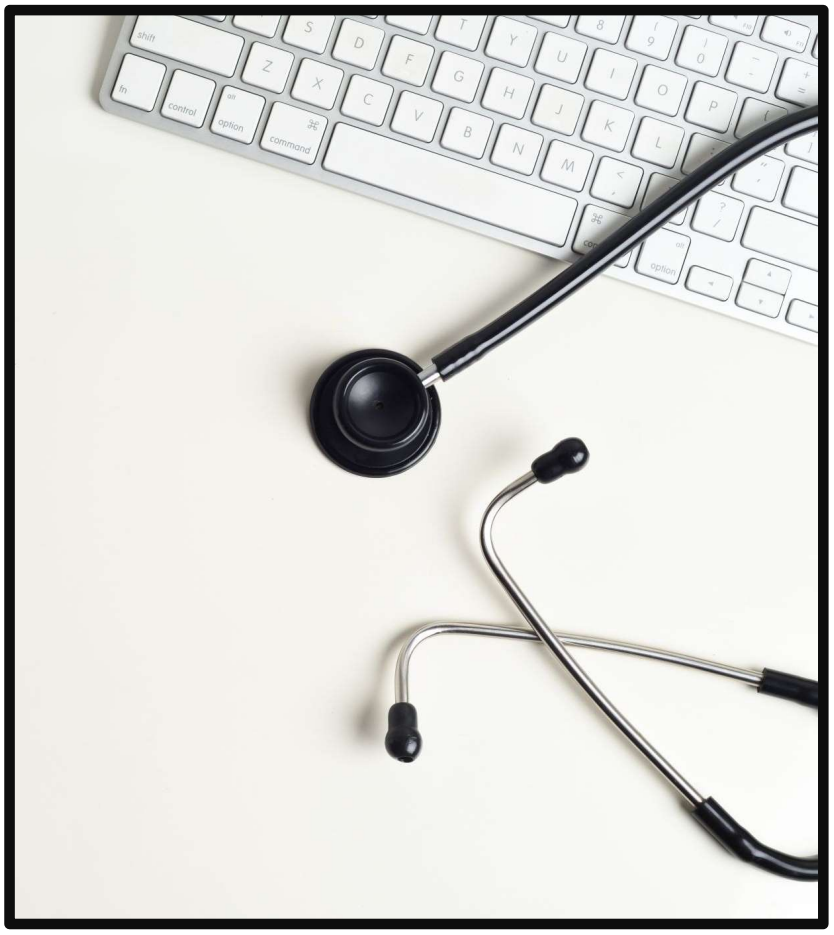
Cindy Y. Jiang Sequencing of Erdafitinib and Enfortumab Vedotin in Patients with FGFR2/3 Altered Advanced Urothelial Cancer: Analysis of UNITE Database. ASCO GU 2024

Why a drug over another option?: My arguments



- CONFIDENT ABOUT MoA
- TREATMENT APPROPRIATENESS
- CONFIDENT ABOUT EFFICACY
- TREATMENT SAFETY/QOL
- ALTERNATIVES
- **SUMMARY**

Summary and conclusions

- Enfortumab Vedotin has a consistent **biological rationale**, **efficacy data** and **solid clinical development** in the post chemo post CPI context with a and therefore seems a valid option to consider in this context

- With an **appropriate training management** safety should NOT result an absolute limitation to the use of EV **although caution and further studies** to potentially anticipate toxicity are highly needed

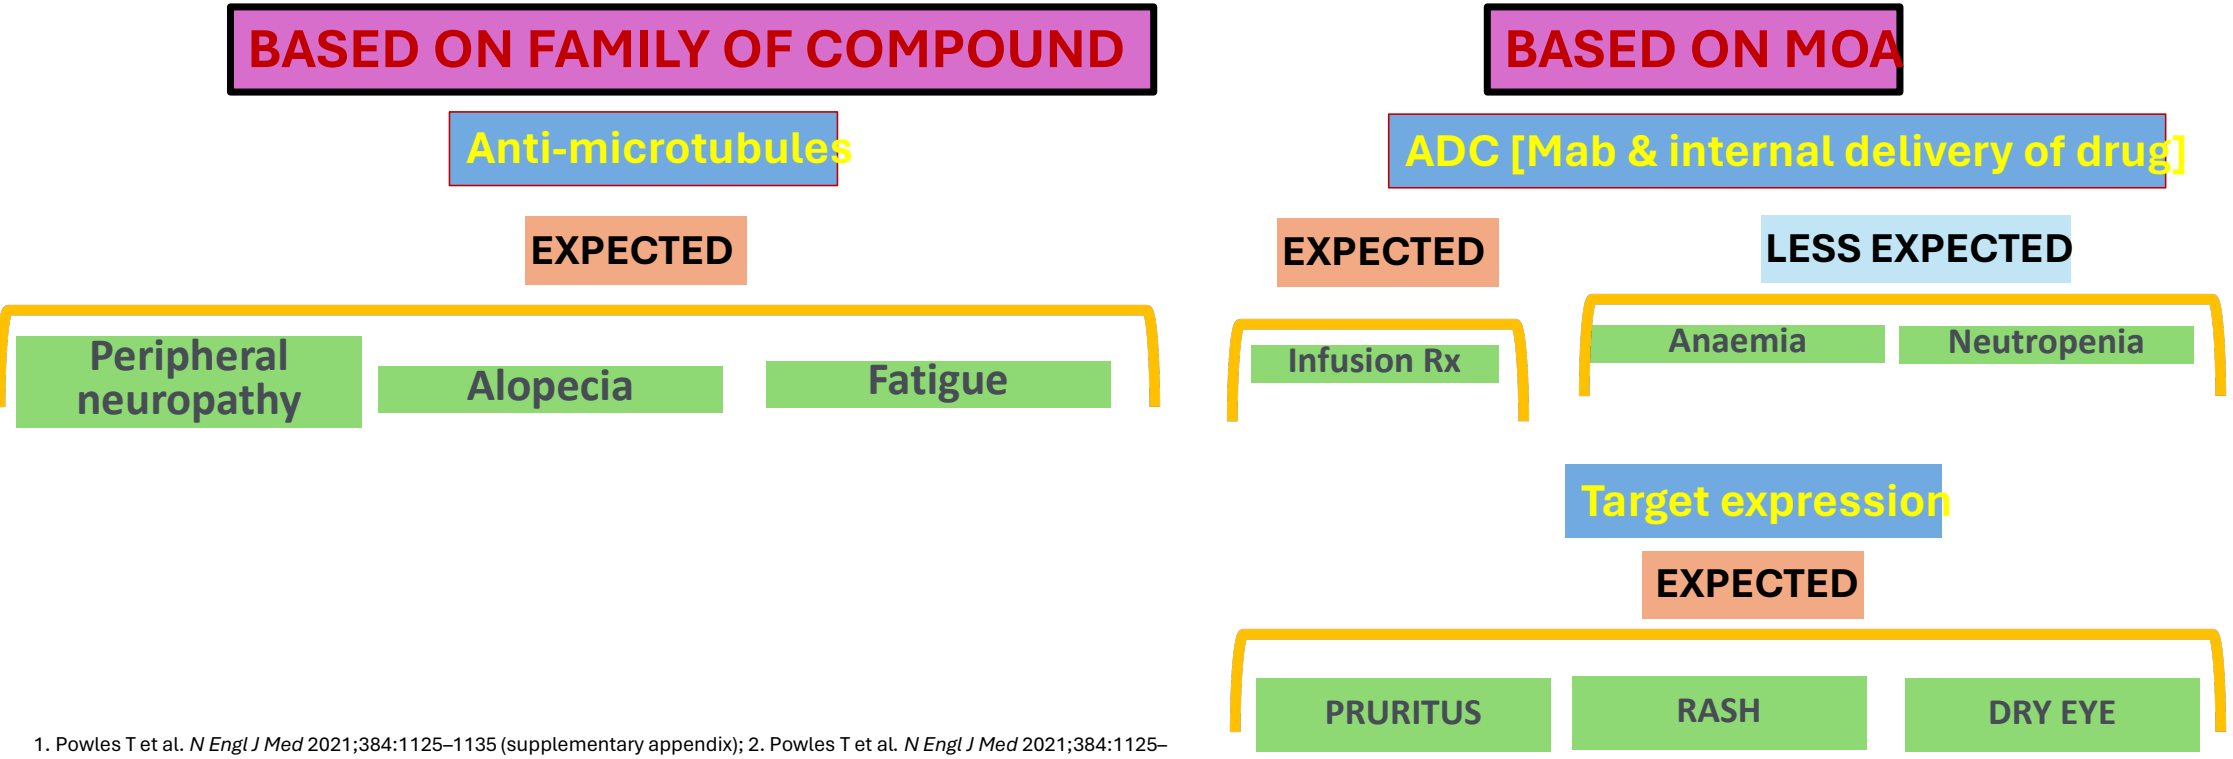
- **Other alternatives with also LE-1** [i.e Erdafitinib] **can be considered** and might have comparable outcomes although its access, safety and dose intensity maintenance seem a bit more challenging

GRACIAS
ignacioduranmartinez@gmaiil.com

BACK UP SLIDES

Understanding toxicity: Understanding EV

- By knowing the drug and the MOA we could somehow anticipate some of the major side effects related to this drug



1. Powles T et al. *N Engl J Med* 2021;384:1125–1135 (supplementary appendix); 2. Powles T et al. *N Engl J Med* 2021;384:1125–1135; 3. Powles T et al. *N Engl J Med* 2021;384:1125–1135 (protocol); 4. Lacouture ME et al. *Oncologist* 2022;27:e223–e232.

Understanding toxicity: Understanding EV

Event, n (%)[1]	Any grade	
	EV (n=296)	Chemotherapy (n=291)
Any TRAE*	278 (**93.9**)	267 (**91.8**)
Most common TRAEs†		
Alopecia	135 (**45.6**)	108 (**37.1**)
Peripheral sensory neuropathy‡	103 (**34.8**)	63 (**21.6**)
Pruritus	96 (**32.4**)	14 (**4.8**)
Fatigue	93 (**31.4**)	66 (**22.7**)
Decreased appetite	92 (**31.1**)	69 (**23.7**)

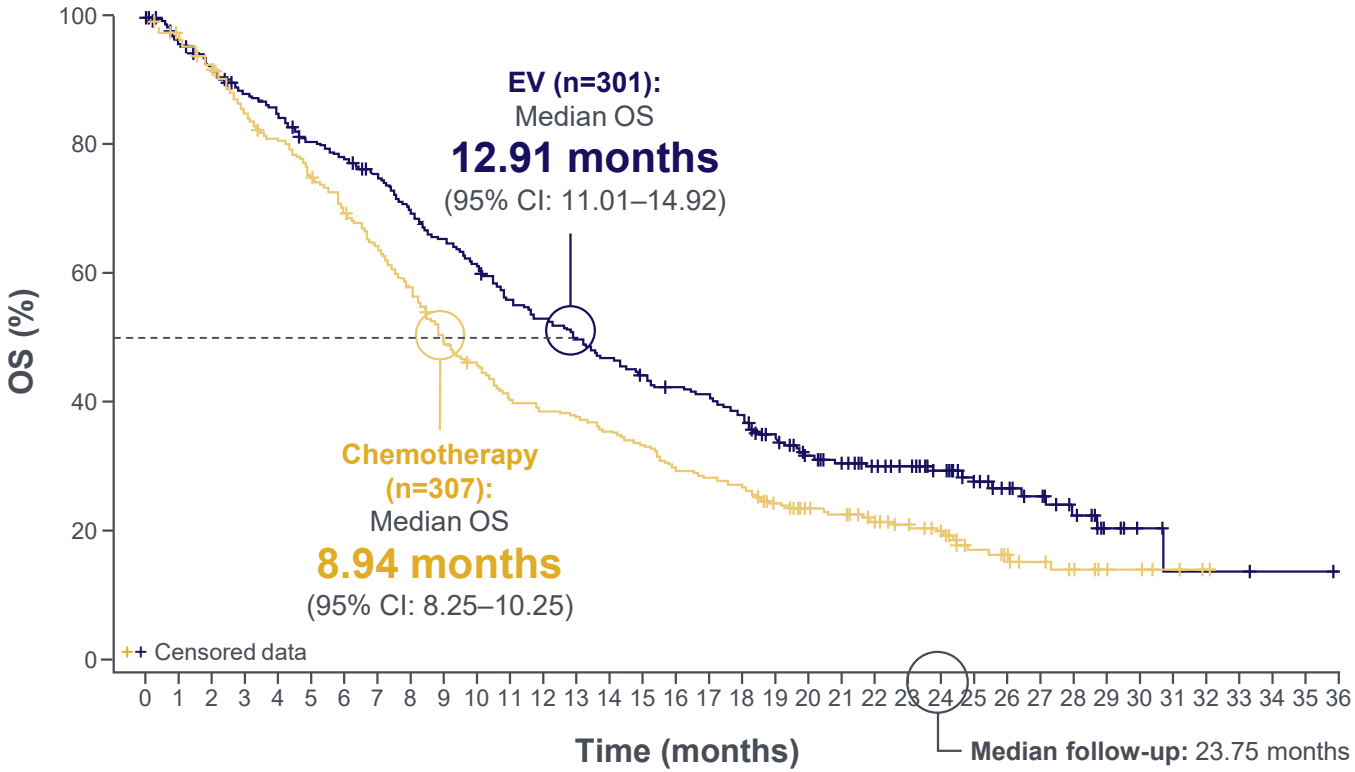
CI, confidence interval; EV, enfortumab vedotin; HR, hazard ratio; PFS, progression-free survival.
Rosenberg JE et al. Presented at ASCO 2022. P4516.

Efficacy in improving overall survival



30% lower

risk of **death** with EV vs. single-agent chemotherapy in the **2-year analysis**

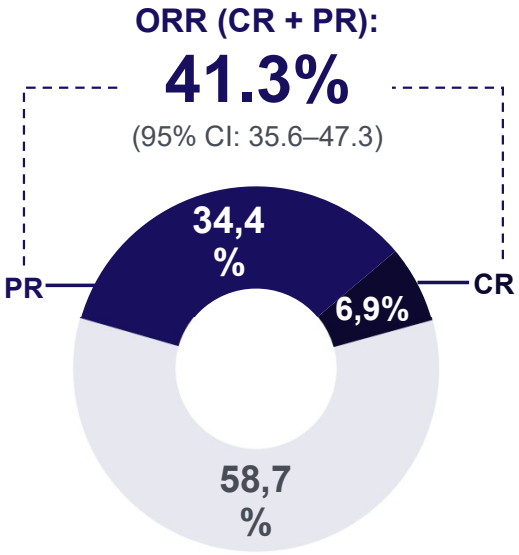
Median OS: 12.91 vs. 8.94 months;
HR 0.70
(95% CI: 0.58–0.85; p<0.001)

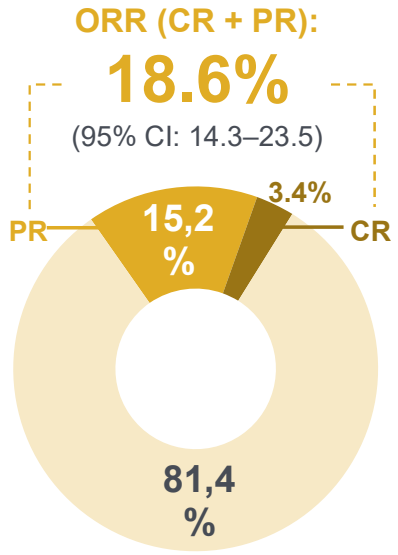
Figure adapted from Rosenberg JE et al. 2022.
Analysis of the intention-to-treat population (all randomised patients).
CI, confidence interval; EV, enfortumab vedotin; HR, hazard ratio; OS, overall survival.
Rosenberg JE et al. Presented at ASCO 2022. P4516.

Efficacy in decreasing tumor burden

Response

Investigator-assessed clinical response rate*

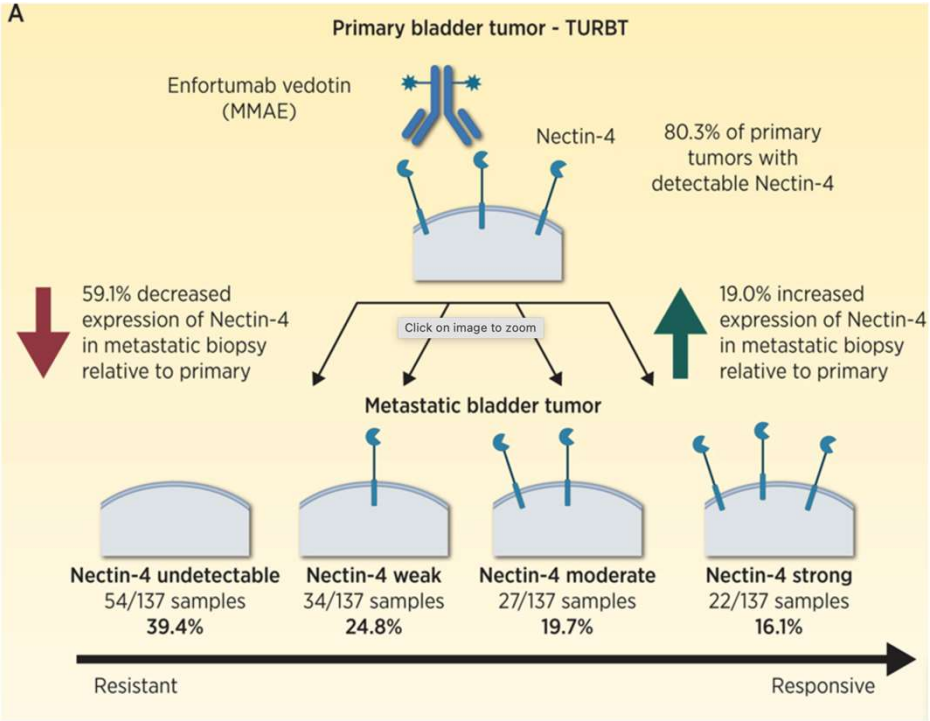




The confirmed ORR was **~2.2 times higher in the EV group** than the chemotherapy group (41.3% vs. 18.6%; p<0.001)

Median follow-up: 23.8 months. Analysis of the intention-to-treat population (all randomised patients).
*Responses according to RECIST v1.1, response evaluable population.
CI, confidence interval; CR, complete response; EV, enfortumab vedotin; ORR, overall response rate; PR, partial response; RECIST, Response Evaluation Criteria in Solid Tumors.
Rosenberg JE et al. Presented at ASCO 2022. P4516.

Nectin-4: Is it clearly predictive?



- Variability of expression of Nectin-4 across settings and studies in bladder cancer [Different antibodies?]
- Still undefined role of NECTIN-4 in mechanisms of resistance
- Some studies revealed high expression of NECTIN-4 in progressors [not involved in res]
- Others suggest downregulation of NECTIN-4 as mechanism of resistance/progression

Reymond N, Fabre S, Lecocq E, Adelaïde J, Dubreuil P, Lopez M. H-Score System

- H-score system, which is the product of **intensity** (score, 0–3), and **percentage** of stained cells (0–100)

- Specimens are classified as **negative** (0; H-score, 0–14), **weak** (1+; H-score, 15–99), **moderate** (2+; H-score, 100–199), and **strong** (3+; H-score, 200–300).
