FROM DETECTION TO PERSONALISED MANAGEMENT: INTEGRATING MYOSTRAIN INTO CARDIO-ONCOLOGY PRACTICE

13:30h-15:00h – 12th November 2026 - Room 2

Sponsored by Myocardial Solutions

MYOCARDIAL SOLUTIONS
Transforming Cardiac & Cancer Care

As cardio-oncology moves beyond conventional LVEF-based assessment, the unmet need is not only earlier detection, but also clearer interpretation, better workflow integration and greater consistency in advanced myocardial analysis. This focused session will explore where MyoStrain may add value by making myocardial characterisation more structured, practical and clinically usable across baseline assessment, treatment surveillance and survivorship

Objectives

- Review the role of advanced myocardial strain analysis in cardio-oncology beyond conventional LVEF.
- Discuss how MyoStrain may help identify and interpret early or subclinical myocardial dysfunction.
- Explore where MyoStrain may add value across the cardio-oncology pathway, including baseline assessment, treatment surveillance and survivorship.
- Understand how structured workflow and reporting may improve the consistency and usability of myocardial characterisation in routine care.

Programme

13:30 – 13:40 **Clinical CMR in cardio-oncology**
Alexander Lyon, Cardiologist, London

13:40 – 13:55 **What's new in Myocardial Strain and tissue characterisation for cardio-oncology?**
Eliseo Vañó, Radiologist, Madrid

13:55 – 14:40 **Interactive clinical case forum**.
Teresa López-Fernández, Cardiologist, Madrid
Alexander Lyon, Cardiologist, London
Eliseo Vañó, Radiologist, Madrid

Scenario 1. Preserved LVEF with borderline MyoStrain at baseline: clinical signal or uncertain finding?
Scenario 2. Subclinical dysfunction during cancer therapy: intervene or monitor?
Scenario 3. In cancer survivors, can MyoStrain guide surveillance intensity and preventive strategies?

14:40 – 14:45 **Take-home messages. Where does MyoStrain fit in the cardio-oncology workflow?**
Teresa López-Fernández, Cardiologist, Madrid

14:45 – 15:00 **Hands-on workstations**. *Guided practical review of datasets and workflow steps*
