QUANTITATIVE IMAGING IN CARDIO-ONCOLOGY: FROM IMAGING BIOMARKERS TO CLINICAL IMPLEMENTATION

14:15h-15:45h - 13th November 2026 - Room 1

Sponsored by Philips

PHILIPS

Cardio-oncology imaging is moving beyond isolated markers and prototype-driven research towards integrated, quantitative and clinically scalable pathways. This workshop will focus on how advanced echocardiographic and CMR biomarkers can improve risk stratification, support earlier detection of myocardial dysfunction, and strengthen longitudinal follow-up in routine practice. The core concept is practical integration: quantitative echocardiography as the scalable front-line tool, with CMR providing complementary phenotyping and clarification when needed.

Objectives

- Review the clinical value of quantitative imaging in cardio-oncology beyond conventional LVEF assessment.
- Discuss how advanced echocardiographic and CMR biomarkers can refine risk stratification, enable earlier detection of cardiotoxicity, and support longitudinal follow-up.
- Demonstrate, through case-based discussion, how imaging innovations can be integrated into routine cardio-oncology practice.

Programme

14:15 – 14:25 **Welcome and introduction**
Danay Valenzuela, Philips
The role of modern cardiac imaging in cancer care.
Ana Martín, Cardiologist, Salamanca

14:25 – 15:25 **Interactive case-based forum: quantitative imaging biomarkers**
Ana Martín, Cardiologist, Salamanca
Belén Terol, Cardiologist, Madrid
Martín Ruiz, Cardiologist, Córdoba

15:25 – 15:30 **Innovation in Cardio-Oncology Imaging**
Belén Terol, Cardiologist, Madrid

15:30 – 15:45 **Hands-on stations and closing remarks**
